

**Project Development Phase**  
**Sprint-1**

Date	31 October 2022
Team ID	PNT2022TMID30291
Project Name	Virtual Eye – Life Guard For Swimming Pools To Detect Active Drowning

Index.html:

Register.html:

The background of the registration page is a photograph of a swimming pool. On the left side, a metal ladder with three rungs leads into the water. The pool's edge is made of light-colored concrete. The water is a clear, bright blue, and the surface shows some ripples and reflections. The overall scene is bright and clean.

## Virtual Eye - Life Guard for Swimming Pools to Detect Active Drowning

[Click here for demo!](#)

Swimming is one of the best exercises that helps people to reduce stress in this urban lifestyle. Swimming pools are found larger in number in hotels, and weekend tourist spots and barely people have them in their house backyard. Beginners, especially, often feel it difficult to breathe underwater which causes breathing trouble which in turn causes a drowning accident. Worldwide, drowning produces a higher rate of mortality without causing injury to children. Children under six of their age are found to be suffering the highest drowning mortality rates worldwide. Such kinds of deaths account for the third cause of unplanned death globally, with about 1.2 million cases yearly.
